ABOUT THE CREATOR OF TRADEOLOGY INDICATORS

- Neil Szczepanski is a full-time options trader and trading coach on YouCanTrade. Neil puts the “tech” in technical trading. Seasoned with both information technology and trading experience, Neil experiments with how artificial intelligence and information technologies can enhance trading.
- He has worked for over 20 years in various information technology senior advisory positions at Fortune 500 organizations. He provided guidance to help the firms he represented achieve growth and increase value with smart technology.
- Neil has been trading since 1988, and also has been coaching his “simple” trading strategies based on statistical probabilities and momentum swing trading. He is an experienced options trader with primary focus as a net options seller.

“CUMULATIVE COMPARATIVE TICKS PCT” INDICATOR

Designed for: Day Traders, Swing Traders, and Long-Term Investors of stock and options

It will help you to:

- Track how the daily Major Market tiki index values are trending for the NASDAQ, DOW 30, RUSSELL, 2000, and the S&P 500.
- Gain better visibility as to how the market breadth of the overall market is trending during the day.
- Avoid trading long in an overall bearish trend or short in a bullish trend.
- See which of the major markets are performing better or worse against the others.
- Improve your market timing by understanding the overall direction pressure of the market throughout the trading day.
- Have better insight into the relative velocity of directional market momentum.

HOW IT WORKS

The 'Cumulative Comparative Ticks Pct' (CCTP) indicator, utilizes the tick indexes for the four major markets: NASDAQ, DOW 30, RUSSELL 2000, and the S&P 500. These tick indexes compare the number of stocks that are rising to the number of stocks that are falling on each of these indexes throughout the market session.

The CCTP indicator then plots a cumulative percentage for each unique index throughout the day that you can track to see which markets are outperforming or underperforming the others, and to see whether the overall price momentum is positive or negative.

The name of this indicator in TradeStation is: “#QCompTicksPct”

HOW IT WORKS

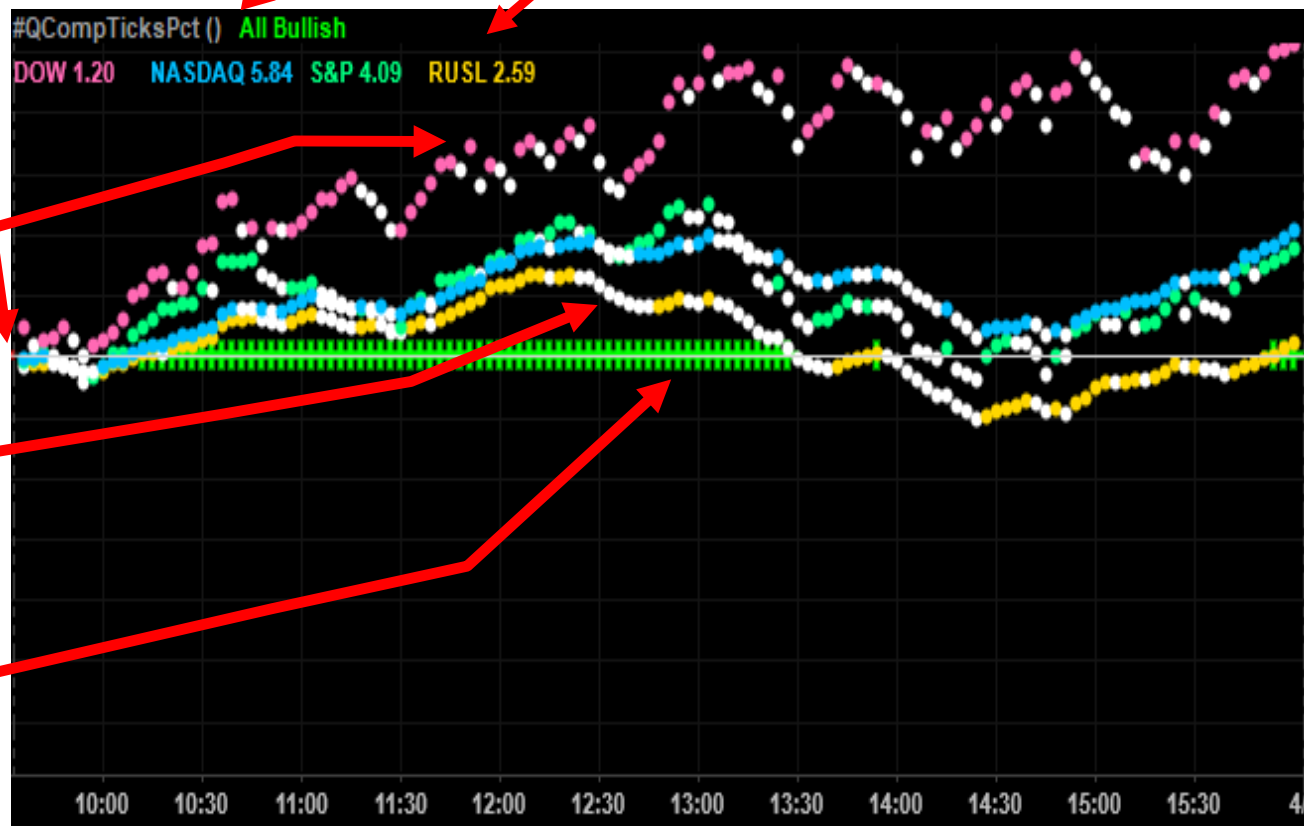

All indices start at same point, at the open, then fan out from there based on market action.

A colored dot shows an index moving higher.

A white dots shows an index moving lower.

The green pipes at zero indicate all indexes are positive, red pipes indicate all indexes are negative.

The legend shows the color for each index

10:00 10:30 11:00 11:30 12:00 12:30 13:00 13:30 14:00 14:30 15:00 15:30 4/3

WHAT YOU GET

When you subscribe to this indicator, it will automatically be downloaded into your TradeStation desktop platform. You can now add it any intraday minute chart.

The supplied workspace will work in both TradeStation 9.5 & 10.

Notes:

- The indicator does not require multi-data charting.

- The indicator does not work on 24-hour sessions, or in the pre or post market stock sessions.

FOLLOW NEIL ON SOCIAL MEDIA

- For a further understanding on how I use this indicator, you can visit my coaching channel: “Tradeology -The Fifth Insight” on YouCanTrade.com and take a free trial.
- In my coaching channel we go through the criteria for trade setups, order placement, and position management, with a variety of trading tools.
- I will teach you how to find trading opportunities on your own, rather than having to always be reliant on someone else.
