

## **Leibovit Volume Reversal [Indicators]**

Mark Leibovit is the developer of the Leibovit Volume Reversal and the publisher and chief market strategist for Leibovit VR Newsletters, VR Trader, the VR Vice Letter, the VR Forecaster annual report and VR Gold Letter. His technical expertise is in stock and futures selection, short and mid-term trading, and broad market timing. He was one of the "Elves" on Louis Rukeyser's Wall Street Week, served as weekly consultant and market monitor guest for PBS Nightly Business Report. He was a member and Market Maker of the Chicago Board Options Exchange. He is the author of the Traders Book of Volume, McGraw Hill, 2011. Timer Digest named him as "Timer of the Year", #2 Intermediate Market Timer, #2 Gold Timer. He is a member of the Market Technicians Association.

The Leibovit Volume Reversal© TradeStation TradingApp is developed by and is a software product of VR Strategic Consultants and Mark Leibovit. This TradeStation TradingApp was programmed by our consultant Harrison Cai of Harrison Programming.

While the exact formula for the Leibovit Volume Reversal™ or the Leibovit VR (Volume Reversal or VR) has remained proprietary for over thirty years, it is based upon an analysis of volume. The Volume Reversal serves to identify and validate a particular type of reversal environment where a shift in market control from buyers to sellers or sellers to buyers occurs, resulting in a change in market direction.

When a VR signal is generated, it is anticipated that a market price movement will follow through in the direction of the Volume Reversal. Leibovit Volume Reversal's can appear as a Positive Volume Reversal (a Positive VR or a VR+) and as a Negative Volume Reversal (a Negative VR or a VR-) Because a VR+ occurs on increased volume in an upward action, it is displayed on your charts directly below the bar that generated it. Conversely, when a Negative VR occurs on a downward action, the VR- is plotted above the bar that generated it. These are mutually exclusive conditions and it is not possible to have both a Positive VR and a Negative VR on the same bar.

Mark Leibovit has utilized his VR indicators for well over thirty-five years for individual stock selection and market timing. The Leibovit Volume Reversal indicators are versatile and can be used across markets for:

- \* trend analysis
- \* short-term trading
- \* mid-term trading
- \* long-term trading
- \* overall broad market timing

The Leibovit Volume Reversal can also act as a complimentary indicator component to your existing trading system. As with any approach in the market there are inherent risks. It is important to familiarize yourself with this product before you use it.

There are four key indicators:

- \* VR Sequential
- \* VR Directional
- \* VR 2-Day
- \* VR Radar

\* "VR Sequential" indicator displays historical and current Positive VR's and Negative VR's. Leibovit VR signals can provide

some of the best leading reversal and trend continuation signals, as well as early alert warning signals prior to major market moves.

- \* "VR Directional" indicator only shows a newly generated VR when it is in the opposite direction of the previous VR, or the previous VR has hit its defined stop-loss level.

- \* "VR 2-Day" (2-Bar) indicator may be used as a trading system by itself. It is based on the principle that follow-through in the VR direction often continues for two days.

- \* "VR Radar" indicator is the VR Sequential for use in RadarScreen.

## **Important Disclaimers:**

All investments are subject to risk, which should be considered on an individual basis before making any investment decision.

Volume Reversal's indicator output is not designed to be used as the sole basis for trading decisions. Volume Reversal is presented as a tool to be used in conjunction with other trading tools and in conjunction with the trader's good judgment and experience regarding the specific security being traded.

The user accepts that they alone are responsible for the financial results of trading decisions, and for determining whether the output of any indicator, including Volume Reversal's, should be used in the current market situation. No claim is being made that the use of Volume Reversal's indicator output will lead to profitable trading or that it will prevent trading losses.

Before using the tool, the user should understand that defects may exist in the code which drives the indicator and may cause incorrect functioning of the indicators, and accept that the tool is being offered 'as is', with no explicit or implied guarantees that the Volume Reversal software is error-free.
